EXPERIENCE

Script Care, Ltd. *Austin, TX, USA*
Software Developer (Go, Echo, Redis/Valkey, MS SQL, GitLab CI) *Mar 2025 – Present*

- **Automated password resets** for Tredium, a pharmacy claims platform, building Go APIs with Redis-backed distributed locking and token caching that eliminated race conditions and cut reset turnaround from ∼3 hours to near-instant.
- Designed **Provider Relations Connect**, a Go/Echo intranet module that replaced a fully manual outreach process, delivering merge-templated email campaigns to thousands of pharmacies with queue tracking and a persistent audit trail.
- Implemented **backend automation pipelines** for pharmacy benefit workflows, **reducing manual effort by 30–40%** and **cutting recurring production tickets by 80%** (5/day to 1/day).
- Led the **Redis-to-Valkey migration** for the Go codebase, inventorying all Redis usage, resolving TLS and ACL authentication blockers, fixing connection pool bugs, and writing a developer guide for the redigo and go-redis clients.

Rice University *Houston, TX, USA*
Software Research & Development Intern (C++, CUDA, MLIR, Python, GitHub Actions) *May 2024 – Dec 2024*

- Developed **Einsummable**, a hybrid tensor-relational ML system that automatically partitions and distributes compute graphs across CPU/GPU clusters, optimizing tensor operations with MLIR and CUDA for **30% faster computation**.
- Integrated **Llama 3** into Einsummable with CUDA for distributed LLM inference, **reducing latency by 40%**.
- Set up **GitHub Actions CI** for Einsummable, **halving deployment cycles** and enforcing **95% code coverage**.

UBS *Pune, MH, India*
Software Engineer (Java, Spring Boot, Oracle SQL, Kafka, Shell) *Jul 2022 – Jul 2023*

- Owned **bi-weekly production releases** for **CAIP** (Corporate Actions and Income Processing), coordinating deployments with upstream and downstream teams.
- Wrote **shell scripts** to automate batch job monitoring and log checks for CAIP, **reducing manual workload by 50%**.
- Developed **Kafka** consumers to ingest corporate action event data into CAIP for downstream income processing.

Software Engineering Intern (Python, Oracle SQL, Unix) *Jan 2022 – Jun 2022*

- **Automated ESG data file mapping** with Python and Oracle SQL, replacing a manual mapping process.
- Wrote SQL validation checks on downstream ESG data, catching data mismatches and missing fields before client delivery.

NTT Data Payment Services *Mumbai, MH, India*
Product Engineering Intern (Java, Python, JUnit, Mockito, Spring Boot, SonarQube) *Jan 2021 – Sep 2021*

- Built a **Python validation script** to detect and filter malformed merchant IDs before pre-processing.
- Wrote **JUnit/Mockito unit tests** for an online payment transaction switch, **raising SonarQube coverage above 90%**.

EDUCATION

Rice University *Aug 2023 – Dec 2024*
M.S. in Computer Science (Data Science and Machine Learning) GPA: 3.7/4.0 *Houston, TX, USA*
Relevant Coursework: Machine Learning, Probabilistic Data Structures, Project Management

Manipal Institute of Technology *Jul 2018 – Aug 2022*
B.Tech. in Computer Science (Minor: Computational Intelligence) GPA: 3.5/4.0 *Manipal, KA, India*

TECHNICAL SKILLS

Languages:	Go, Python, Java, C++, SQL, Perl
Backend & Infra:	Echo, Spring Boot, Redis/Valkey, Kafka, Linux, systemd, Cloudflare Tunnel
Databases:	MS SQL Server, PostgreSQL, Oracle, MongoDB
Tools & ML:	Git, GitLab CI, GitHub Actions, SonarQube, CUDA, MLIR, PyTorch

PROJECTS

Rate Limiter (Go, Redis, Lua, Cloudflare Tunnel)

- Engineered a **Token Bucket rate-limiting service** in Go using atomic Redis Lua scripts to eliminate race conditions under concurrent load.
- Deployed as a publicly accessible API at **rate-limiter.josephmohanty.me** via Cloudflare Tunnel with systemd-managed auto-restart on an Ubuntu server.
- Published a companion **Go middleware package** that adds rate limiting to any HTTP service in one line of code.
